Restore from a Time Machine backupWhen you restore from a Time Machine backup, you can choose to restore all your files, or restore both the Mac operating system (macOS) and all your files.. Then turn on your Mac Open Migration Assistant, which in the Utilities folder of your Applications folder.. Turn on your Mac, then immediately press and hold Command (⌘)-R to start up from macOS Recovery.. You might want to restore your files after the originals were deleted from your Mac, or the hard disk (or SSD) in your Mac was erased or replaced, such as during a repair.

The setup assistant includes a migration assistant If your Mac doesn't start up all the way, or you also want to restore the macOS you were using when you created the backup, follow the steps to restore both macOS and your files.. Select the information to transfer, then click Continue to start the transfer This screen might look different on your Mac:If you have a lot of content, the transfer might take several hours to finish.. Restore both macOS and your filesThese steps erase your hard disk, then use your backup to restore both your files and the specific version of macOS you were using when you created the backup.. Click Continue If your disk is encrypted, you're asked to unlock the disk: Enter the administrator password you used when setting up Time Machine, then click Continue again.
